

J. J. Keller™

Environmental Reporting Services

► *Helping you attain and sustain environmental, health and safety compliance*

J. J. Keller™ Environmental Reporting Services provide you with a dedicated consultant who will determine your specific site's federal, state and local environmental requirement needs, then prepare and file your reports and permits quickly and accurately.

Our team of experienced consultants has the knowledge and expertise to handle any environmental challenge you face. Below is a list of some of the most requested services we provide:

Area of Service	Requirement	Applicability
Air Quality Permitting	Sites with the potential to emit pollutants to air often require a permit to monitor/control emissions. (Deadlines vary, generally from January to June.)	Solvent use, large natural gas boilers, painting and coating, fiberglass operations, wood dust, etc.
Spill Prevention, Control and Countermeasures (SPCC)	Training, inspection records, and a certified spill plan.	Facilities that store oil in 55 gallon containers or larger, with maximum on-site capacity greater than 1,320 gallons. (Ex. oil, waste oil, fuels and vegetable oils.)
Tier II Report	An annual report to provide awareness to emergency responders about large volumes of stored hazardous substances. (Due by March 1 annually.)	All facilities that exceed the following thresholds for chemicals stored at any one time: Hazardous (requires an SDS) > 10,000 lbs. or Extremely Hazardous >500 lbs. (Ex. Battery Acid/Sulfuric Acid, Propane, Diesel Fuel, Lead, Compressed Gases.)
Toxics Release Inventory (TRI)	A report is triggered by hazardous material usage and requires annual reporting of releases to air, land or water. (Due July 1 annually.)	All facilities that exceed the following usage thresholds for TRI-listed chemicals: Manufacture/Process > 25,000 lbs.; 'Otherwise Use' > 10,000 lbs.; or Persistent Bioaccumulative Toxics (PBT). (Ex. Chromium, Copper, Nickel, Xylene, Formaldehyde, Toluene, Certain Glycol Ethers, Disocyanates.)
Wastewater/Industrial Discharge	Permits require annual water quality monitoring, sampling and reporting.	Processes triggering a requirement for a permit include: wash water, rinse water, cooling water, spillage, etc.
Storm Water Pollution Prevention Planning	A plan to manage water, inspections, sampling, etc.	Industrial facilities (specific SIC codes apply) where storm water runoff has the potential to pick up significant materials (e.g. oil, dust, debris, rust, etc.)
Waste Management	Proper handling, storage, documentation, and reporting of waste.	Waste generators must meet management codes and file the appropriate paperwork.

Why J. J. Keller & U.S. Compliance Corporation?

J. J. Keller & U.S. Compliance Corporation have formed a strategic partnership that provides you with unmatched expertise in environmental compliance and related best practices. You will benefit from a combined 85+ years of working with companies in all industries to attain and sustain environmental compliance.
