# Spill Prevention Control & Countermeasures (SPCC)

➤ Ongoing onsite guidance and resources for improving compliance

Under EPA regulations, if you store more than 1,320 gallons of oil in drums 55 gallons and larger, or if you store more than 42,000 gallons of oil underground, you are required to have a Spill Prevention Control and Countermeasures Plan (SPCC) in place. An SPCC plan is a detailed, facility-specific, written description of how a facility's operations meet the prevention measures outlined in the regulations.

J. J. Keller and U.S. Compliance have a trained staff to help you comply with the requirements. We will visit your facility to conduct an onsite inspection to identify any deficiencies and to prepare and file the facility diagram. Once the inspection is complete, we'll prepare an SPCC plan in accordance with the regulations. A registered Professional Engineer (PE) will verify that the plan complies with the regulations.

## Required SPCC elements:

- Professional Engineer (PE) certification
- SPCC plan amendments
- Facility information
- Emergency procedures
- Potential equipment failure
- Secondary containment
- Demonstration of practicability
- Personnel training and responsibilities
- Inspections, tests and records
- Facility security
- Tank storage
- Field constructed aboveground containers
- Additional requirements
- Transfer operations, pumping & process/non-applicable portions of the SPCC regulations
- Facility drainage
- Bulk storage containers
- Monthly facility inspection checklist
- Notification - reportable spill events
- SPCC training records
- SPCC action plan
- Drainage event record

*The rules (40CFR 112) apply to all types of sites, including industrial sites, commercial sites, retail locations, offices, restaurants, hotels, construction sites, farms and municipal properties.*

## Why J. J. Keller and U.S. Compliance Corporation?

J. J. Keller and U.S. Compliance Corporation have formed a strategic partnership that provides you with unmatched expertise in safety and environmental compliance and related best practices. You will benefit from a combined 85+ years of working with companies in all industries to develop best-in-class safety programs to reduce risk.

## Take a proactive approach to environmental compliance.
